15-213/18-213: Lecture TR, 1:30-2:50, DH 2210 12 units 15-513: Videotaped lectures and recitations (These will appear within 24 hours guaranteed, but typically within a couple of hours.) 6 or 12 units The ICS course provides a programmer's view of how computer systems execute programs, store information, and communicate. It enables students to become more effective programmers, especially in dealing with issues of performance, portability and robustness. It also serves as a foundation for courses on compilers, networks, operating systems, and computer architecture, where a deeper understanding of systems-level issues is required. Topics covered include: machine-level code and its generation by optimizing compilers, performance evaluation and optimization, computer arithmetic, memory organization and management, networking technology and protocols, and supporting concurrent computation. Course Syllabus (includes important rules on cheating, late assignments, regrade requests, etc.) Thu, Oct 8: C Boot Camp: The staff will be offering a C Boot Camp on Saturday, October 10, 2-4pm, in Rashid Auditorium (GHC 4401) to all interested students in 15-213, 15-513, and 18-213. You'll want to attend if you had trouble with the C puzzles in Monday's recitation or do not have experience programming in C. Boot camp won't be videotaped, but the slides will be posted afterwards. Mon, Sep 14: Linux Boot Camp: The staff will be offering a Linux Boot Camp on Saturday, September 19, 2-4pm, in Rashid Auditorium (GHC 4401) to all interested students in 15-213, 15-513, and 18-213. You'll want to attend if you're not familiar with Linux or could use a refresher. We'll cover Linux basics such as using ssh and scp to login and copy files to the Shark machines, using vim to edit files, setting file permissions, the Linux file hierarchy, the Linux command line, and the distributed Andrew File system. Boot camp won't be videotaped, but the slides will be posted afterwards. Getting Help Email 15-213-staff@cs.cmu.edu TA Office Hours Sun, Mon, Tue, Wed, Thu (and Fridays following Thu due dates): 6:00-9pm (10:30 near due dates). WeH 5207, no apt needed. Here is the complete schedule. Walk-in Tutoring Mon and Wed, 8:30-11:00pm, Mudge Reading Room, no apt needed Course Materials Schedule Lecture schedule, slides, recitation notes, readings, and code Assignments Details of assignments, due dates, and policies Exams Information about quizzes, exams, and final Lab Machines Instructions for using the lab machines Resources Additional course resources Course Information For details See the course syllabus for details (below) is just a few overview bits). Lectures TR 1:30-2:50 DH 2210 Recitation Sections Section A: Mon 10:30-11:20, GHC 5222, Jenna MacCarley Section B: Mon 10:30-11:20, PH 226B, Franz Franchetti Section C: Mon 11:30-12:20, WeH 5310, Karthik Palaniappan Section D: Mon 11:30-12:20, GHC 5222, Ben Spinelli (Lead TA - Recitations) Section E: Mon 12:30-1:20, WeH 5310, Isaac Manjarres Section F: Mon 12:30-1:20, DH 2105, Jeffery Liu Section G: Mon 1:30-2:20, DH 2105, Aditya Shah Section H: Mon 1:30-2:20, WeH 5310, Celeste Neary Section I: Mon 2:30-3:20, WeH 5310, Ben Spinelli Section J: Mon 2:30-3:20, PH 226B, Shashank Goyal Section K: Mon 3:30-4:20, PH 226B, Monil Shah (Lead TA - Office Hours) Non-recitation TAS Dipayan Bhattacharya Debanshu Das Dhruven Shah Dhruv Saksena Ishant Dawer Kumar Vlkrampjet (CMU-SV) Leeakrishna Nukala (CMU-SV) Peter Pearson (Lead TA - Exams) Shelton Dsouza Surbhi Motghare Yicheng Fang Textbooks Randy E. Bryant and David R. O'Hallaron, Computer Systems: A Programmer's Perspective, Third Edition, Pearson, 2016 Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Second Edition, Prentice Hall, 1988 Grading Composed from total lab performance (50%) and total exam performance (50%). Labs There are 7 labs, not evenly weighted. See the assignments page for the breakdown. Exams There is one midterm exam, online, proctored, closed book (30%). Course Outline School/School of Informatics College/College of Science and Engineering Credit level (Normal year taken) SCQF Level 8 (Year 2 Undergraduate) Availability Available to all students SCQF Credits 10 ECTS Credits 5 Summary This course is concerned with the design, implementation and engineering of digital computer systems. It offers an introduction to the internal structure of digital computers. Course description The primary aim of the course is to convey an understanding of the internal structure and implementation of digital computers. To impart this knowledge, we first explain how the interface between hardware and software is typically constructed. This interface consists of several key components: * The binary representation and manipulation of atomic data. * The structure of a typical instruction set. * The environment in which a program executes, and the notion of processes and virtual memory. In addition to explaining the interface between hardware and software, this course introduces the ideas behind the hardware implementation of a processor. This consists of several further components: * Combinational logic - how simple stateless building blocks such as adders, multiplexers and decoders can be constructed from logic elements. * Sequential logic - how components with state, such as latches, registers, register files and memories can be constructed from logic elements. * Processor structure - how a simple instruction set can be implemented using combinational and sequential logic components. This material is prefaced by a brief introduction to the C programming language, which is widely used as a systems programming language. Information for Visiting Students Pre-requisites None High Demand Course? Yes Course Delivery Information Academic year 2017/18, Available to all students (SV1) Quota: None Course Start Semester 1 Timetable Learning and Teaching activities (Further Info) Total Hours: 100 (Lecture Hours 15, Seminar/Tutorial Hours 5, Supervised Practical/Workshop/Studio Hours 10, Summative Assessment Hours 1, Programme Level Learning and Teaching Hours 2, Directed Learning and Independent Learning Hours 67) Assessment (Further Info) Written Exam: 60 %, Coursework: 40 %, Practical Exam: 0 % Additional Information (Assessment) In order to pass the course you must satisfy all of the following requirements: * achieve at least 40% in the examination; * obtain a combined total mark of at least 40% There will be at least two assessed coursework. You should expect to spend approximately 30 hours on the coursework for this course. Feedback Not entered Exam Information Exam Diet Paper Name Hours & Minutes Main Exam Diet S1 (December): 1:00 Resist Exam Diet (August): 1:00 Learning Outcomes On completion of this course, the student will be able to: Demonstrate an understanding of key concepts in computer architecture, including binary representation, exceptions, interrupts, virtual memory, processes and pipelined execution Sketch the design of a simple processor and explain how it operates Demonstrate knowledge of I/O devices and the means by which they interface to a processor and its memory system Demonstrate an understanding of the design and operation of important combinational and sequential components within a processor, such as adders, registers, and state machines Demonstrate understanding of an execution pipeline, based on the MIPS architecture Reading List * D.A.
